THE ACCELERATOR

Own the capacity.
Keep the margin.

Dedicated port capacity to high-demand destinations at a floor rate well under the observed market. Every minute carried over your ports earns you the margin - whether we sell the traffic or you do.

10yr	**At par**	**Net**	**Live**
TERM TO MATURITY	BOUGHT BACK	MARGIN TO YOU	MARKET PRICING

The opportunity

Own the capacity, keep the margin - and accelerate the whole network

This is your opportunity: acquire your own dedicated voice capacity - brand-new ports to a high-demand destination, at a floor well under the market and yours to keep on a live, licensed, revenue-generating network. You earn the margin on every minute they carry. And true to its name, the Accelerator accelerates: the traffic your capacity carries is the fuel for Hyperscaling - the process that pushes more calls onto Jingle's higher-margin endpoints and grows the whole network. Every allocation you take speeds Hyperscaling, Jingle and Minutes Network up together, and that momentum feeds straight back into the traffic your capacity carries.

Your side of it

OWN THE CAPACITY	Dedicated ports on a high-demand destination, at a per-minute floor well under the observed market. Yours for a fixed 10-year term; at the end, renew for another term or let it mature and we buy the capacity back at the price you paid.
RUN IT, OR WE RESELL IT	Terminate your own traffic and pay just the floor, or appoint us to resell your capacity, carrying our wholesale traffic over it. Either way, the margin above your floor is yours.
KEEP THE FULL MARGIN	Realized margin accrues to you on every carried minute. Minutes Network earns a separate share on the sale - never taken from your margin, so nothing you are shown is diluted.

What your capacity accelerates

ACCELERATES HYPERSCALING	Your allocation puts traffic on the network, and traffic is exactly what Hyperscaling feeds on - it makes deploying Jingle onto more compatible endpoints faster and easier.
ACCELERATES JINGLE	More traffic and more endpoints mean more calls terminating over Jingle and more frequent callees onboarded into the app. The network grows the app; the app lifts the higher-margin path.
ACCELERATES MINUTES NETWORK	More volume grows the network's scale, its DePIN participation and the fees the whole network earns - all of it visible on the public explorer - and opens the door to more destinations.
AND IT FEEDS YOUR PORTS	A bigger, faster-growing network carries more traffic - and more traffic means more wholesale demand for the capacity you hold, on every route the network opens.

Own it. Earn it. Accelerate it.

minutes NETWORK

Commercial terms, at a glance

The Accelerator sells Minutes Network's wholesale voice capacity as dedicated ports you own - on a long-term contract, at a per-minute floor well under the observed market. Run your own traffic over that capacity, or let our wholesale traffic fill it; either way, every minute carried earns you the margin above your floor. The terms below summarise the deal; the binding detail lives in your purchase agreement.

PRODUCT	Dedicated voice termination capacity to a named destination, sold as dedicated ports.
CONTRACT TERM	A fixed 10-year term from activation. At the end you can renew for a further term, or let it mature - and if it matures, Minutes Network buys the capacity back at the price you paid, on top of the margin earned along the way.
CAPACITY	Up to 500 minutes per day per port (peak-hour and ASR adjusted). Each package is a set number of dedicated ports.
GO-LIVE	Provisioning typically completes within 2-3 business days (an indicative operational estimate, not a guarantee). Once live, under resale our wholesale traffic fills your ports to their full daily throughput - around 500 minutes per port a day, guaranteed, with anything above that a bonus - and it earns from the first carried minute.
PRICING	Each allocation is priced as exactly one settled cycle of its ports at its floor rate; bigger commitments carry lower floors. Floors track the live market and re-base to it immediately if the market moves, with no notice period, matched at the same moment by fresh buy and sell rates on both sides. The return is not guaranteed.
YOU EARN	Everything realized above your floor rate, on every minute carried over your ports.
TWO WAYS TO RUN IT	Resale - we resell your capacity, carrying our wholesale traffic over it, and your margin accrues live. Self-run - terminate your own traffic and pay just the floor.
PAYOUTS	Margin accrues live and is paid out to you on your cadence - monthly for entry sizes, while the largest packages let you choose monthly payouts or the four-month tier-1 cycle (the strongest rates). Payouts by bank wire or USDC.
PAYMENT & COMPLIANCE	Bank wire (unique reference per order), or cryptocurrency across Bitcoin, Ethereum, BNB Chain, Solana and Cardano, USDT and USDC included (detected on-chain automatically).
TRANSFER	A transferable contractual right to telecom capacity. Minutes Network FZ-LLC holds a right of first refusal to repurchase at your original price.
NETWORK	Traffic runs over the Minutes Network DePIN - DePIN fees are paid as normal, and traffic is visible on the public explorer.
PAPERWORK	A purchase agreement on every order, a numbered invoice at activation. Minutes Network FZ-LLC, Ras Al Khaimah - UAE law.

RESALE - WE RESELL YOUR CAPACITY

Our wholesale traffic fills your capacity. You keep the full margin above your floor on every carried minute - live in your portal, no telecom operation needed.

SELF-RUN - YOU FILL YOUR PORTS

Take your interconnect pack - SIP address, assigned IP, technical prefix - and terminate your own traffic. Each minute bills at your floor from a usage balance you top up; whatever you charge above it is yours.

The routes, priced

Sell ranges are observed market data; the return is not guaranteed.

ROUTE	ENTRY	FLOOR FROM	LIVE SELL RANGE	FLOOR VS MARKET
Mexico +52	$1,094	**$0.00678/min**	$0.00746 - $0.0090 margin from 2.33% to 10.03%	
Jamaica +1876	$3,528	**$0.23489/min**	$0.24057 - $0.2831 margin from 2.28% to 2.42%	
Albania +355	$5,425	**$0.33639/min**	$0.3699 - $0.6380 margin from 2.28% to 9.96%	
Colombia +57	$1,850	**$0.00381/min**	$0.0042 - $0.0100 margin from 2.19% to 10.24%	
Pakistan +92	$2,310	**$0.02865/min**	$0.0315 - $0.0471 margin from 2.27% to 9.95%	

One route in full - Mexico

Every floor sits under the route's lowest market sell rate of $0.00746/min - margins are referenced against it.

COMMITMENT	CAPACITY	MAX / DAY	YOUR FLOOR	MARGIN FROM
$1,094	10 ports	5k min	**$0.00729**	+2.33%
$5,460	50 ports	25k min	**$0.00728**	+2.47%
$61,020	150 ports	75k min	**$0.00678**	+10.03%

Each margin shown is a conservative floor - the spread over your floor at the market's lowest quoted rate, earned on every minute carried, not once; anything the market pays above it is upside. Margins span the entry allocation to the largest: bigger commitments carry lower floors, so larger allocations earn a wider margin. Indicative, never guaranteed. Same structure on every route: the site shows each ladder live, and only sizes deliverable from held capacity are offered.

How the daily maximum is worked out

1,440
theoretical min / port / day
a port running 24/7

→

- **a ~12-hour waking window**
- **60-80% answer rates (ASR)**
- **circuits, traffic and numbers dialled**

→

500
practical min / port / day

Real days land at or under this ceiling - the conservative, practical basis behind every capacity figure in this brief.

Settlement and payouts

01 **Margin accrues live**
Every carried minute lands in your portal as it is recorded - minutes, realized rate, your margin above the floor. Under resale our wholesale traffic fills your ports to their full daily throughput - around 500 minutes per port a day, guaranteed, with anything above that a bonus - and the pipe produces for the life of the contract.

02 **It unlocks on your cadence**
From the monthly cycle to the four-month tier-1 cycle - monthly pays you sooner, tier-1 commands the strongest rates and carries the lowest floors.

03 **Withdraw whenever you like**
Anything unlocked is yours: bank wire or USDC, minimum $50, processed within two business days.

PAYOUT TERMS	MARGIN ACCRUES	PAYOUT FREQUENCY	RELATIVE RATES
Monthly	Live, as minutes flow	Monthly	Base
Every 4 months - tier-1	Live, as minutes flow	Every ~4 months	**Strongest**

The capacity remains under the owner's control

MINIMUM SELL RATE	The owner sets the minimum rate their capacity sells at; no traffic is carried below their floor or set minimum.
PAUSE AND RESUME	One click pauses traffic over the ports; another resumes it. Effective immediately, recorded in the audit trail.
LIVE STATISTICS	Ports online, minutes carried, realized rates and settlement balances - read from the exchange carrying the traffic.
OWN INTERCONNECT	A registered exchange identity with a private routing deal - route traffic directly, or use the cloud core platform.

Stated plainly

This is a telecommunications capacity purchase - not a deposit, security, or investment scheme. Rates shown are observed market data; the return is not guaranteed. Minutes Network takes its own share of the margin separately - its consideration for reselling your capacity, or for providing the infrastructure when you run it yourself. That share is never included in, and never dilutes, any margin figure displayed or communicated - displayed margins are stated net to you. Identity verification and anti-money-laundering checks apply to every purchase, a generated purchase agreement carries the binding terms of each order, and Minutes Network FZ-LLC (Ras Al Khaimah, UAE) is the contracting entity. DePIN fees are paid as normal, and traffic is visible on the public explorer.

More Minutes, More Jingle

Jingle terminates calls directly on connected endpoints. When a call's destination has an endpoint available, the traditional carrier hop drops out of the path - fewer hands in the call, a higher margin on the same minute. Coverage grows endpoint by endpoint.

How the Accelerator drives it

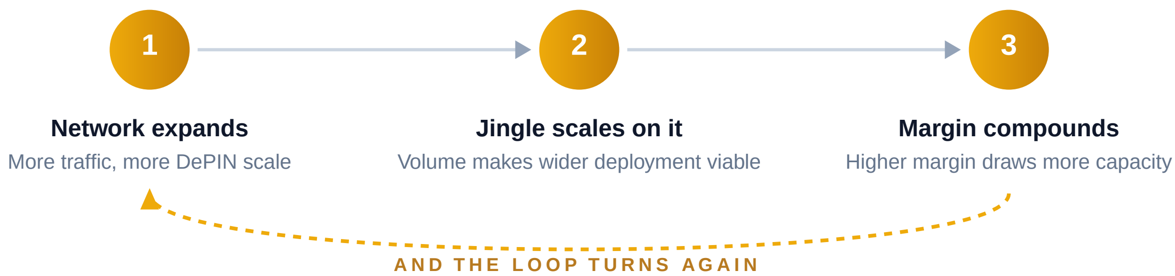
01 **The Accelerator sells capacity**
Every allocation places committed demand on the network.

02 **More traditional traffic on the network**
That volume is what the Hyperscaling model feeds on - it makes scaling Jingle onto more endpoints easier.

03 **Jingle deployed on more endpoints**
Best-effort deployment onto every compatible endpoint, growing coverage step by step.

04 **More traffic connects over Jingle**
Volume powers this three ways: more chance of a call landing on an existing endpoint, more frequent callees to onboard into Jingle under the Hyperscaling model, and more chance of matching a call to Jingle's application user base.

The bigger picture - one compounding loop



BEST EFFORT

Jingle termination applies where an endpoint is available and is never guaranteed for any given call, route or period. Where it applies, matching traffic terminates at a higher margin under the Hyperscaling model.

How the Accelerator accelerates

The Accelerator is named for what it does. Every allocation placed pushes Minutes Network's growth on four fronts at once - more traffic, firmer forward commitments, stronger wholesale terms and a bigger network. This page is the network's side of the deal described in this brief.

MORE TRADITIONAL TRAFFIC	Allocating inventory capacity forward puts committed minutes onto Minutes Network. Self-run holders bring their own termination traffic; resale holders commit ports we fill with wholesale flows. Either way, the network carries traffic it would not otherwise have.
CAPACITY COMMITTED AHEAD OF CARRY	Every allocation is capacity committed before the traffic flows - firm, forward demand the network can plan around: interconnects secured, routes opened, wholesale carry arranged with certainty.
A STRONGER WHOLESALE POSITION	Committed, filled ports let Minutes Network take the best terms and commitments the market offers for the capacity it actually holds - including the tier-1 agreements that carry the lowest rates on the platform.
NETWORK FEES AND DEPIN PARTICIPATION	More carried volume means more fees earned across the whole network, with every minute of it visible on the public explorer. DePIN fees are paid as normal - the Accelerator never bypasses the network's economics.

And then it comes back around

01 **An allocation goes live - committed capacity lands on the network**

02 **Traffic flows, and Hyperscaling feeds on it**

03 **Jingle reaches further - more endpoints deployed, frequent callees join, more calls match**

04 **The network scales - and demand for capacity grows with it**

Owners whose incentives point our way

If you ever wonder what Minutes Network gets out of allocating capacity rather than holding it - the answer is everything above. The Accelerator turns its holders into a distribution channel of owners who want exactly what the network wants: more traffic, more routes, more scale.

> The Accelerator sells telecommunications capacity - not a deposit, security or investment product. Rates shown anywhere are observed market data; the return is not guaranteed. Minutes Network takes its own share of the margin separately - its consideration for reselling your capacity, or for providing the infrastructure when you run it yourself.
